Special Issue Type: Conference Special Issue
The Special Issue for SOItmc 2016, and 2017 conference. Best quality papers that are prudently and deliberately selected from the conference will constitute the special issue.

Overview

Scientific advances and technological changes are major drivers of economic development in the 'New Economy'. In this context, open innovation has become a key determinant of growth in the globalized knowledge society. However, there are limitations in related research in that there exist only a few multi-faceted approaches. Further, dynamic aspects of open innovations have not been investigated enough. Such limitations are apparent especially in presenting challenges and opportunities that open innovation can create in many Startups, Small and Medium Enterprises(SMEs_, and in most important cities).

To fill these knowledge gaps, we call for papers from many fields of study on topics related to open innovation, open innovation ecosystems, related policies and practices, and their impacts on the whole economy and society for possible inclusion in the special issue. The papers will go through a deliberate peer review process that TFSC requires.

Temporary Schedule for the Special Issue

Best quality paper will be deliberately selected from SOItmC & SJSU 2016 and SOItmC & RTU 2017 conference following below time schedule:

(i) Deadline for submission: 30th, September, 2017

(ii) Completion of the review process: 28th, February, 2018

(iii) Final acceptance notification: 10th, March, 2018

Authors can submit their papers any time after June 2017 until September 2017. When asked to choose article type, please click on '*Science, Technology and Innovation*'. All submitted manuscripts must be formatted according to TFSC standards. A full Guide for Authors can be seen at:
